

Assignment 1: Reproducibility, Workflow, Version Control

Siyang Chen

OVERVIEW

This exercise accompanies the lessons in Environmental Data Analytics (ENV872L) on reproducibility, workflow, and version control.

Directions

1. Change “Student Name” on line 3 (above) with your name.
2. Use the lesson as a guide. It contains code that can be modified to complete the assignment.
3. Work through the steps, **creating code and output** that fulfill each instruction.
4. Be sure to **answer the questions** in this assignment document. Space for your answers is provided in this document and is indicated by the “>” character. If you need a second paragraph be sure to start the first line with “>”. You should notice that the answer is highlighted in green by RStudio.
5. When you have completed the assignment, **Knit** the text and code into a single PDF file. You will need to have the correct software installed to do this (see Software Installation Guide) Press the **Knit** button in the RStudio scripting panel. This will save the PDF output in your Assignments folder.
6. After Knitting, please submit the completed exercise (PDF file) to the dropbox in Sakai. Please add your last name into the file name (e.g., “Salk_A01_Reproducibility.pdf”) prior to submission.

The completed exercise is due on Thursday, 17 January, 2018 before class begins.

1) Discussion Questions

Question

Why are reproducible practices becoming the norm in data analytics?

Answer: Because they can help the researcher to improve their work in the future by recreating the results. They can also help others to understand how the study achieve this result.

Question

What are your previous experiences with data analytics, R, and Git? Include both formal and informal training.

Answer: I took the statistics class that teaches R in the first semester, but I feel like I’ve forgotten a lot since then. I’ve also taken John’s advanced GIS last semester, so we used GitHub, but not really Git itself.

Question

Are there any components of the course about which you feel confident?

Answer: I think I will feel confident about the spatial analysis part of this course.

Question

Are there any components of the course about which you feel apprehensive?

Answer: I'm a little anxious about the statistics part of this course.

2) GitHub

Your Repository

Provide a link below to your course repository in GitHub. Make sure you have pulled all recent changes from the course repository (https://github.com/KateriSalk/Environmental_Data_Analytics) and that you have updated your course README file.

Answer: https://github.com/Sylvia-C/Environmental_Data_Analytics
